Selected Quality stories

★ Hand hygiene performance has increased substantially as measured by our electronic monitoring initiative (**44% to 60%**), associated with a **30%** reduction in nosocomial transmission of MRSA

Through the implementation of standardized order sets the rate of hypoglycemia in admitted patients has declined from **>20%** in 2010, to around 10% in 2013 to **<5%** in 2016.

Rapid Referral Clinic has seen over **8,000** patients through April 2018, and diverted over **1,600** from admission to the medicine service. The estimated savings of the clinic amounts to **1-2 beds/day** over the year

Our readmission rate for Congestive Heart Failure has dropped by **30%** from 20% to 14% as of June 2018. Along with this, our median LOS for Heart Failure has decreased to below the National and Provincial benchmarks.
