

Care Closer to Home

The Repatriation Journey

Your care journey began outside Sunnybrook.

You were brought to **Sunnybrook for specialized care.**

You should be told about repatriation within **1-3 days** after your arrival at Sunnybrook.

You will only be repatriated if it is safe. **It is possible you will still need intensive care.**

You will then be **repatriated back to a hospital closer to your home.**

Your **Doctors** will decide when your need for specialized care is over, and a member of the care team will let you know.

Sunnybrook will communicate and consult with the receiving hospital **before, during and after the transition** to ensure it is smooth.

Sunnybrook will **arrange your transportation.**

Your care will continue at the hospital closer to your home.
